

METHOD FOR THE TREATMENT OR PREVENTION OF FLAVIVIRUS
INFECTIONS USING NUCLEOSIDE ANALOGUES

FIELD OF THE INVENTION

The present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues.

10 BACKGROUND OF THE INVENTION

Hepatitis is a disease occurring throughout the world. It is generally of viral nature, although there are other causes known. Viral hepatitis is by far the most common form of hepatitis. Nearly 750,000 Americans are affected by hepatitis each year, and out of those, more than 150,000 are infected with the hepatitis C virus (HCV).

20 HCV is a positive-stranded RNA virus belonging to the *Flaviviridae* family and has closest relationship to the pestiviruses that include hog cholera virus and bovine viral diarrhea virus (BVDV). HCV is believed to replicate through the production of a complementary negative-strand RNA template. Due to the lack of an efficient culture replication system for the virus, HCV particles were isolated from pooled human plasma and shown, by electron microscopy, to have a diameter of about 50-60 nm. The HCV genome is a single-stranded, positive-sense RNA of about 9,600 bp coding for a polyprotein of 3009-3030 amino-acids, which is cleaved
30 co- and post-translationally by cellular and two viral proteinases into mature viral proteins (core, E1, E2, p7, NS2, NS3, NS4A, NS4B, NS5A, NS5B). It is believed that the structural proteins, E1 and E2, the major glycoproteins are

embedded into a viral lipid envelop and form stable heterodimers. It is also believed that the structural core protein interacts with the viral RNA genome to form the nucleocapsid. The nonstructural proteins designated NS2 to NS5 include proteins with enzymatic functions involved in virus replication and protein processing including a polymerase, protease and helicase.

10 The main source of contamination with HCV is blood. The magnitude of the HCV infection as a health problem is illustrated by the prevalence among high-risk groups. For example, 60% to 90% of hemophiliacs and more than 80% of intravenous drug abusers in western countries are chronically infected with HCV. For intravenous drug abusers, the prevalence varies from about 28% to 70% depending on the population studied. The proportion of new HCV infections associated with post-transfusion has been markedly reduced lately due to advances in diagnostic tools used to screen blood donors.

20 The only treatment currently available for HCV infection is interferon- α (IFN- α). However, according to different clinical studies, only 70% of treated patients normalize alanine aminotransferase (ALT) levels in the serum and after discontinuation of IFN, 35% to 45% of these responders relapse. In general, only 20% to 25% of patients have long-term responses to IFN. Clinical studies have shown that combination treatment with IFN and ribavirin (RIBA) results in a superior clinical response than IFN alone. Different
30 genotypes of HCV respond differently to IFN therapy, genotype 1b is more resistant to IFN therapy than type 2 and 3.

There is therefore a great need for the further development

of anti-viral agents.

Summary of the invention

The present invention relates to a method for the treatment or prevention of *Flavivirus* infections in a host comprising administering a therapeutically effective amount of a compound having the formula I or a pharmaceutically acceptable salt thereof:

wherein

B is chosen from a purine, a pyrimidine or an analogue thereof;

Ra is chosen from H, monophosphate, diphosphate, triphosphate, carbonyl substituted with a C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₆₋₁₀ aryl, and

wherein each **Rc** are independently chosen from H, C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₆₋₁₀ aryl and an hydroxy protecting group; and

Z is halogen or **ORb**, wherein **Rb** is chosen from of H, C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₁₋₆ acyl, or an hydroxy protecting group

D_1 and D_2 are independently selected from N_3 , F, or H, D_1 and D_2 can also be joined to be chosen from C_3 -cycloalkyl, $=CH_2$, or $=CF_2$, and

wherein said compound is in the form of a single enantiomer or a mixture thereof including racemic mixtures;

with the proviso that when **B** is adenine, **Z** is **ORb**, D_1 is H, D_2 is H and **Rb** is H, **Ra** is not triphosphate or H.

10 In another aspect, there is provided a pharmaceutical formulation comprising the compounds of the invention in combination with a pharmaceutically acceptable carrier or excipient.

Still another aspect, there is provided a method for treating or preventing a viral infection in a host comprising administering a combination comprising at least one compound according to formula I and at least one further therapeutic agent.

20

In another aspect of the invention is the use of a compound according to formula I, for the preparation of a medicament for treating or preventing a viral infections in a host.

DETAILED DESCRIPTION OF THE INVENTION

In one embodiment, the viral infection is chosen from *Flavivirus* infections.

30

In one embodiment, the *Flavivirus* infection is chosen from Hepatitis C virus (HCV), bovine viral diarrhea virus (BVDV), hog cholera virus and yellow fever virus.

In an other embodiment, the *Flavivirus* infection is Hepatitis C virus.

In one embodiment, there is also provided a method for inhibiting or reducing the activity of viral polymerase in a host comprising administering a therapeutically effective amount of a compound having the formula I.

10 In another embodiment, the viral polymerase is HCV polymerase.

The present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula Ia or a pharmaceutically acceptable salt thereof:

(Ia)

20

wherein

B is chosen from a purine, a pyrimidine or an analogue thereof;

Ra is chosen from H, monophosphate, diphosphate, triphosphate, carbonyl substituted with a C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₆₋₁₀ aryl, and

wherein each **Rc** are independently chosen from H, C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₆₋₁₀ aryl and an hydroxy protecting group; and

Z is halogen or **ORb**, wherein **Rb** is chosen from of H, C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₁₋₆ acyl, or an hydroxy protecting group; and

wherein said compound is in the form of a single enantiomer or a mixture thereof including racemic mixtures;

with the proviso that when **B** is adenine, **Z** is **ORb** and **Rb** is

10 H, **Ra** is not triphosphate or H.

In one embodiment, the compounds and methods of the present invention comprise those wherein the following embodiments are present, either independently or in combination.

In one embodiment, **B** is chosen from adenin-9-yl, guanin-9-yl, inosin-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-9-yl, 2-6-diamino-purin-9-yl, thymin-1-yl, cytosin-1-yl, uracil-1-yl, 3-carboxamido-1,2,4-triazol-1-yl, 1-deaza-adenin-9-yl, 1-deaza-guanin-9-yl, 1-deaza-inosin-9-yl, 1-deaza-2-amino-purin-9-yl, 1-deaza-2-amino-6-chloro-purin-9-yl, 1-deaza-2-6-diamino-purin-9-yl, 3-deaza-adenin-9-yl, 3-deaza-guanin-9-yl, 3-deaza-inosin-9-yl, 3-deaza-2-amino-purin-9-yl, 3-deaza-2-amino-6-chloro-purin-9-yl 3-deaza-2-6-diamino-purin-9-yl, 7-deaza-adenin-9-yl, 7-deaza-guanin-9-yl, 7-deaza-inosin-9-yl, 7-deaza-2-amino-purin-9-yl, 7-deaza-2-amino-6-chloro-purin-9-yl, 7-deaza-2-6-diamino-purin-9-yl, 7-deaza-8-aza-adenin-9-yl, 7-deaza-8-aza-guanin-9-yl, 7-deaza-8-aza-inosin-9-yl, 7-deaza-8-aza-2-amino-purin-9-yl, 7-deaza-8-aza-2-amino-6-chloro-purin-9-yl, 7-

20

30

deaza-8-aza-2-6-diamino-purin-9-yl, 8-aza-adenin-9-yl, 8-aza-guanin-9-yl, 8-aza-inosin-9-yl, 8-aza-2-amino-purin-9-yl, 8-aza-2-amino-6-chloro-purin-9-yl, 8-aza-2-6-diamino-purin-9-yl, 2-aza-adenin-9-yl, 2-aza-guanin-9-yl, 2-aza-inosin-9-yl, 2-aza-2-amino-purin-9-yl, 2-aza-2-amino-6-chloro-purin-9-yl, 2-aza-2-6-diamino-purin-9-yl, 3-deaza-thymin-1-yl, 3-deaza-cytosin-1-yl, 3-deaza-uracil-1-yl, 5-aza-thymin-1-yl, 5-aza-cytosin-1-yl, 5-aza-uracil-1-yl, 6-aza-thymin-1-yl, 6-aza-cytosin-1-yl, 6-aza-uracil-1-yl

10 each of which is unsubstituted or substituted by at least one of NHR_3 , $\text{C}_{1-6}\text{alkyl}$, $-\text{OC}_{1-6}\text{alkyl}$, Br, Cl, F, I or OH, wherein R_3 is H, $\text{C}_{1-6}\text{alkyl}$ or $\text{C}_{1-6}\text{acyl}$.

In one embodiment, **B** is chosen from adenin-9-yl, guanin-9-yl, inosin-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-9-yl, 2-6-diamino-purin-9-yl, thymin-1-yl, cytosin-1-yl, uracil-1-yl, 3-carboxamido-1,2,4-triazol-1-yl, 3-deaza-adenin-9-yl, 3-deaza-guanin-9-yl, 3-deaza-inosin-9-yl, 3-deaza-2-amino-purin-9-yl, 3-deaza-2-amino-6-chloro-purin-9-yl, 3-deaza-2-6-diamino-purin-9-yl, 7-deaza-adenin-9-yl, 7-deaza-guanin-9-yl, 7-deaza-inosin-9-yl, 7-deaza-2-amino-purin-9-yl, 7-deaza-2-amino-6-chloro-purin-9-yl, 7-deaza-2-6-diamino-purin-9-yl, 7-deaza-8-aza-adenin-9-yl, 7-deaza-8-aza-guanin-9-yl, 7-deaza-8-aza-inosin-9-yl, 7-deaza-8-aza-2-amino-purin-9-yl, 7-deaza-8-aza-2-amino-6-chloro-purin-9-yl, 7-deaza-8-aza-2-6-diamino-purin-9-yl, 8-aza-adenin-9-yl, 8-aza-guanin-9-yl, 8-aza-inosin-9-yl, 8-aza-2-amino-purin-9-yl, 8-aza-2-amino-6-chloro-purin-9-yl, 8-aza-2-6-diamino-purin-9-yl, 2-aza-adenin-9-yl, 2-aza-guanin-9-yl, 2-aza-inosin-9-yl, 2-aza-2-amino-purin-9-yl, 2-aza-2-amino-6-chloro-purin-9-yl, 2-aza-2-6-diamino-purin-9-yl, 3-deaza-thymin-1-yl, 3-deaza-cytosin-1-yl, 3-deaza-uracil-1-yl, 5-

aza-thymin-1-yl, 5-aza-cytosin-1-yl, 5-aza-uracil-1-yl, 6-
aza-thymin-1-yl, 6-aza-cytosin-1-yl, 6-aza-uracil-1-yl
each of which is unsubstituted or substituted by at least
one of NHR_3 , $\text{C}_{1-6}\text{alkyl}$, $-\text{OC}_{1-6}\text{alkyl}$, Br, Cl, F, I or OH,
wherein R_3 is H, $\text{C}_{1-6}\text{alkyl}$ or $\text{C}_{1-6}\text{acyl}$.

In one embodiment, **B** is chosen from adenin-9-yl, guanin-9-
yl, inosin-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-
9-yl, 2-6-diamino-purin-9-yl, thymin-1-yl, cytosin-1-yl,

uracil-1-yl, 6-aza-thymin-1-yl, 6-aza-cytosin-1-yl, 6-aza-
uracil-1-yl

each of which is unsubstituted or substituted by at least
one of NHR_3 , $\text{C}_{1-6}\text{alkyl}$, $-\text{OC}_{1-6}\text{alkyl}$, Br, Cl, F, I or OH,
wherein R_3 is H, $\text{C}_{1-6}\text{alkyl}$ or $\text{C}_{1-6}\text{acyl}$.

In one embodiment, **B** is chosen from adenin-9-yl, guanin-9-
yl, inosin-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-
9-yl, 2-6-diamino-purin-9-yl, thymin-1-yl, cytosin-1-yl,
30 uracil-1-yl, 3-carboxamido-1,2,4-triazol-1-yl each of which
is unsubstituted or substituted by at least one of NHR_3 , C_{1-}

alkyl, -OC₁₋₆alkyl, Br, Cl, F, I or OH, wherein **R**₃ is H, C₁₋₆alkyl or C₁₋₆acyl.

In a further embodiment, **B** is chosen from adenin-9-yl, guanin-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-9-yl, 2-6-diamino-purin-9-yl, thymin-1-yl, cytosin-1-yl, uracil-1-yl, each of which is unsubstituted or substituted by at least one of NHR₃, C₁₋₆alkyl, -OC₁₋₆alkyl, Br, Cl, F, I or OH, wherein **R**₃ is H, C₁₋₆alkyl or C₁₋₆acyl.

10

In a further embodiment, **B** is chosen from guanin-9-yl, cytosin-1-yl, uracil-1-yl, each of which is unsubstituted or substituted by at least one of NHR₃, C₁₋₆alkyl, -OC₁₋₆alkyl, Br, Cl, F, I or OH, wherein **R**₃ is H, C₁₋₆alkyl or C₁₋₆acyl.

In a further embodiment, **B** is cytosin-1-yl, which is unsubstituted or substituted by at least one of NHR₃, C₁₋₆alkyl, Br, Cl, F, I or OH, wherein **R**₃ is H, C₁₋₆alkyl or C₁₋₆acyl.

20

In a further embodiment, **B** is guanin-9-yl, which is unsubstituted or substituted by at least one of NHR₃, C₁₋₆alkyl, Br, Cl, F, I or OH, wherein **R**₃ is H, C₁₋₆alkyl or C₁₋₆acyl.

In a further embodiment, **B** is uracil-1-yl, which is unsubstituted or substituted by at least one of NHR₃, C₁₋₆alkyl, Br, Cl, F, I or OH, wherein **R**₃ is H, C₁₋₆alkyl or C₁₋₆acyl.

30

In one embodiment, **B** is chosen from adenin-9-yl, guanin-9-yl, inosin-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-

9-yl, 2-6-diamino-purin-9-yl, thymine-1-yl, cytosine-1-yl, 5-fluoro-cytosine-1-yl, uracil-1-yl, 5-fluorouracil or 1,2,4-triazole-3-carboxamide base (ribose base).

In one embodiment, **B** is chosen from adenine-9-yl, guanine-9-yl, inosine-9-yl, 2-amino-purin-9-yl, 2-amino-6-chloro-purin-9-yl, 2-6-diamino-purin-9-yl, thymine-1-yl, cytosine-1-yl, 5-fluoro-cytosine-1-yl, uracil-1-yl, or 1,2,4-triazole-3-carboxamide base (ribose base).

10

In one embodiment, **B** is chosen from guanine-9-yl, cytosine-1-yl, 5'-fluoro-cytosine-1-yl, 5'-fluorouracil -1-yl or uracil-1-yl.

In one embodiment, **B** is chosen from guanine-9-yl, cytosine-1-yl, 5'-fluoro-cytosine-1-yl, 5'-fluorouracil -1-yl or uracil-1-yl.

In one embodiment, **B** is cytosine-1-yl.

20

In one embodiment, **B** is 5-fluoro-cytosine-1-yl.

In one embodiment, **B** is 5-fluorouracil.

In one embodiment, **B** is guanine-9-yl.

In one embodiment, **B** is uracil-1-yl.

In a further embodiment, **B** is

Wherein;

X is H, halogen or NHR₁₀, wherein **R**₁₀ is H, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl;

Y is H, halogen or NHR₁₁, wherein **R**₁₁ is H, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl;

Y₂ is H, halogen or NHR₁₂, wherein **R**₁₂ is H, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl;

10 **R**₉ is H, hydroxy protecting group, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl;

Y₃ is H, halogen or NHR₁₃, wherein **R**₁₃ is H, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl;

R₇ is H, halogen, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl;

R₈ is H, halogen, C₁₋₆acyl, C₁₋₆ alkyl, C₂₋₆ alkenyl, or C₂₋₆ alkynyl.

In one embodiment,

20 **X** is H, halogen or NHR₁₀, wherein **R**₁₀ is H.

Y is H, halogen or NHR₁₁, wherein **R**₁₁ is H.

Y₂ is H, halogen or **NHR₁₂** , wherein **R₁₂** is H.
R₉ is H, hydroxy protecting group, C₁₋₆ alkyl.
Y₃ is H, halogen or **NHR₁₃** , wherein **R₁₃** is H.
R₇ is H, halogen, or C₁₋₆ alkyl.
R₈ is H, halogen or C₁₋₆ alkyl.

In a further embodiment,

- X** is H, F, or **NHR₁₀** , wherein **R₁₀** is H.
10 **Y** is H, F, or **NHR₁₁** , wherein **R₁₁** is H.
Y₂ is H, F, or **NHR₁₂** , wherein **R₁₂** is H.
R₉ is H.
Y₃ is H, F, or **NHR₁₃** , wherein **R₁₃** is H.
R₇ is H, F, or C₁₋₆ alkyl.
R₈ is H, F, or C₁₋₆ alkyl.

In one embodiment of the invention, **Ra** is chosen from H, monophosphate, diphosphate, and triphosphate.

- 20 In another embodiment of the invention, **Ra** is H.

In one embodiment, **Z** is F or **ORb**, wherein **Rb** is chosen from of H, C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₁₋₆ acyl, or an hydroxy protecting group.

In one embodiment, **Z** is F.

In one embodiment, **Z** is **ORb**, wherein **Rb** is chosen from of H, C₁₋₆ alkyl, C₂₋₆ alkenyl, C₂₋₆ alkynyl, C₁₋₆ acyl, or an hydroxy protecting group.

- In one embodiment, **Z** is **ORb**, wherein **Rb** is chosen from of H,
30 C₁₋₆ alkyl, or an hydroxy protecting group.

In one embodiment, **Z** is **ORb**, wherein **Rb** is chosen from of H, or methyl.

In one embodiment, **Z** is **ORb**, wherein **Rb** is H.

D₁ and **D₂** are independently selected from **N₃**, **F**, or **H**, **D₁** and **D₂** can also be joined to be chosen from cyclopropyl, difluorocyclopropyl --CH_2 , or --CF_2 .

D₁ and **D₂** are independently selected from **F**, or **H**, **D₁** and **D₂** can also be joined to be chosen from cyclopropyl, difluorocyclopropyl --CH_2 , or --CF_2 .

D₁ and **D₂** are joined and are cyclopropyl.

10 **D₁** and **D₂** are joined and are difluorocyclopropyl.

D₁ and **D₂** are joined and are --CH_2 .

D₁ and **D₂** are joined and are --CF_2 .

In one embodiment, **D₁** is H or F.

In one embodiment, **D₂** is H or F.

In one embodiment, **D₁** is H.

In one embodiment, **D₂** is H.

In one embodiment, **D₁** is F.

In one embodiment, **D₂** is F.

In one embodiment, **D₁** is **N₃** and **D₂** is H.

20 In one embodiment, **D₁** is H and **D₂** is **N₃**.

In one embodiment, **D₁** is **N₃** and **D₂** is F.

In one embodiment, **D₁** is F and **D₂** is **N₃**.

In one embodiment, **D₁** is H and **D₂** is F.

In one embodiment, **D₁** is F and **D₂** is H.

In one embodiment, **D₁** and **D₂** are H.

In one embodiment, **D₁** and **D₂** are F.

30 In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a

compound having the formula Ib or a pharmaceutically acceptable salt thereof:

wherein **Ra**, **B**, **D₁**, **D₂** and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula Ic or a pharmaceutically acceptable salt thereof:

wherein **Ra**, **B**, **D₁**, **D₂** and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula Id or a pharmaceutically acceptable salt thereof:

(Id)

wherein **Ra**, **B**, **D₁**, **D₂** and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula **Ie** or a pharmaceutically acceptable salt thereof:

(Ie)

wherein **Ra**, **B**, **D₁**, **D₂** and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula **If** or a pharmaceutically acceptable salt thereof:

(If)

wherein **Ra**, **B**, and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula Ig or a pharmaceutically acceptable salt thereof:

(Ig)

wherein **Ra**, **B**, and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula Ih or a pharmaceutically acceptable salt thereof:

(Ih)

wherein **Ra**, **B**, and **Z** are as defined above.

In a further embodiment, the present invention relates to a method for the treatment or prevention of *Flavivirus* infections using nucleoside analogues in a host comprising administering a therapeutically effective amount of a compound having the formula Ii or a pharmaceutically acceptable salt thereof:

(Ii)

10 wherein **Ra**, **B**, and **Z** are as defined above.

In one embodiment, a compound of formula (I) is chosen from:

3'-deoxycytidine Z=H, Compound #1 , 3'-deoxycytidine- 5'triphosphate Z=triphosphate, Compound #2	
5-Fluoro-3'-deoxycytidine Z=H, Compound #3 5-Fluoro-3'-deoxycytidine- 5'triphosphate Z=triphosphate, Compound #4	

<p>3'-deoxyuridine Z=H, Compound #5</p> <p>3'-deoxyuridine- 5'triphosphate Z=triphosphate, Compound #6</p>	
<p>5-Fluoro-3'-deoxyuridine Z=H, Compound #7</p> <p>5-Fluoro-3'-deoxyuridine- 5'triphosphate Z=triphosphate, Compound #8</p>	
<p>3'-deoxythymidine Z=H, Compound #9</p> <p>3'-deoxythymidine- 5'triphosphate Z=triphosphate, Compound #10</p>	
<p>3'-deoxyguanosine Z=H, Compound #11</p> <p>3'-deoxyguanosine- 5'triphosphate Z=triphosphate, Compound #12</p>	

<p>2-N-acetyl-3'-deoxyguanosine Z=H, Compound #13</p> <p>2-N-acetyl-3'-deoxyguanosine- 5'triphosphate Z=triphosphate, Compound #14</p>	
<p>5-Methyl-3'-deoxycytidine Z=H, Compound #15,</p> <p>5-Methyl-3'-deoxycytidine- 5'triphosphate Z=triphosphate, Compound #16</p>	
<p>5-Iodo-3'-deoxycytidine Z=H, Compound #17,</p> <p>5-Iodo-3'-deoxycytidine- 5'triphosphate Z=triphosphate, Compound #18</p>	
<p>5-Chloro-3'-deoxycytidine Z=H, Compound #19,</p> <p>5-Chloro-3'-deoxycytidine- 5'triphosphate Z=triphosphate, Compound #20</p>	

<p>3'-fluoro-3'-deoxyguanosine Z=H, Compound #21</p> <p>3'-fluoro-3'-deoxyguanosine - 5'triphosphate Z=triphosphate, Compound #22</p>	
<p>3'-fluoro 3'-deoxycytidine Z=H, Compound #23,</p> <p>3'-fluoro 3'-deoxycytidine- 5'triphosphate Z=triphosphate, Compound #24</p>

It will be appreciated by those skilled in the art that the compounds of formula (I) contain at least three chiral centres and which are marked by 1, 2 and 3. When D1 and D2 are different, the compounds of formula (I) contain at least four chiral centres which are marked by 1, 2, 3 and 4. The compounds of formula (I) thus exist in the form of different optical isomers (e.g β-L and β-D) and geometric isomers trans or α and cis or β. All such enantiomers, geometric isomers and mixtures thereof including racemic mixtures are included within the scope of the invention. The single optical isomer or enantiomer can be obtained by method well known in the art, such as chiral HPLC, enzymatic resolution and the use of chiral auxiliary.

According to one embodiment, the atoms marked by 1 and 2 are in the cis or β configuration.

According to one embodiment, the atoms marked by 1 and 2 are in the cis or β configuration while the atom marked by 3 is in a trans or α configuration with respect to the atom 1 and 2.

According to one embodiment, compounds of formula I of the present invention are provided substantially in the form of the β -D configuration.

10

According to one embodiment, compounds of formula I of the present invention are provided substantially in the form of the β -L configuration.

By "substantially" is meant that there is more one enantiomer than of the other enantiomer.

In another embodiment, the compounds of formula I of the present invention are at least 95% free of the corresponding β -D enantiomer.

20

In another embodiment, the compounds of formula I of the present invention are at least 97% free of the corresponding β -D enantiomer.

Still in another embodiment, the compounds of formula I of the present invention are at least 99% free of the corresponding β -D enantiomer.

30 In another embodiment, the compounds of formula I of the present invention are at least 95% free of the corresponding β -L enantiomer.

In another embodiment, the compounds of formula I of the present invention are at least 97% free of the corresponding β -L enantiomer.

Still in another embodiment, the compounds of formula I of the present invention are at least 99% free of the corresponding β -L enantiomer.

10 There is also provided pharmaceutically acceptable salts of the compounds of formula I of the present invention. By the term pharmaceutically acceptable salts of the compounds of formula (I) are meant those derived from pharmaceutically acceptable inorganic and organic acids and bases. Examples of suitable acids include hydrochloric, hydrobromic, sulphuric, nitric, perchloric, fumaric, maleic, phosphoric, glycollic, lactic, salicylic, succinic, toluene-p-sulphonic, tartaric, acetic, citric, methanesulphonic, formic, benzoic, malonic, naphthalene-2-sulphonic and benzenesulphonic acids.

20 Salts derived from appropriate bases include alkali metal (e.g. sodium), alkaline earth metal (e.g. magnesium), ammonium and NR_4^+ (where R is C_{1-4} alkyl) salts.

Unless otherwise defined, all technical and scientific terms used herein have the same meaning as commonly understood by one of ordinary skill in the art to which this invention belongs. All publications, patent applications, patents, and other references mentioned herein are incorporated by
30 reference in their entirety. In case of conflict, the present specification, including definitions, will control. In addition, the materials, methods, and examples are

illustrative only and not intended to be limiting.

As used in the present application, "compound(s) of formula (I)" refers to all compounds identified by formula (I) and formulae (Ia) to (Ii).

As used in this application, the term "purine or pyrimidine or an analogue thereof" is meant a purine or pyrimidine base found in nucleotide or an analogue thereof which mimics such bases in that their structures (the kinds of atoms and their arrangement) are similar to the normal bases but may possess additional or lack certain of the functional properties of the normal bases. Such analogues include those derived by replacement of a CH moiety by a nitrogen atom (for example, 5-azapyrimidines such as 5-azacytosine) or vice versa (for example 7-deazapurines, such as 7-deazadenosine or 7-deazaguanosine) or both (e.g. 7-deaza, 8-azapurines). Analogues of such bases also include those compounds wherein ring substituents are either incorporated, removed or modified by conventional substituents known in the art e.g. halogen, hydroxyl, amino, C1-6 alkyl. Such purine or pyrimidine base, analogues and derivatives will be well known to those skilled in the art.

As used in this application, the term "alkyl" represents an unsubstituted or substituted (by a halogen, nitro, CONH₂, COOH, O-C₁₋₆ alkyl, O-C₂₋₆ alkenyl, O-C₂₋₆ alkynyl, hydroxyl, amino, or COOQ, wherein Q is C₁₋₆ alkyl; C₂₋₆ alkenyl; C₂₋₆ alkynyl) straight chain, branched chain or cyclic hydrocarbon moiety (e.g. isopropyl, ethyl, fluorohexyl or cyclopropyl). The term alkyl is also meant to include alkyls in which one or more hydrogen atoms is replaced by an halogen, more preferably, the halogen is fluoro (e.g. CF₃- or CF₃CH₂-).

As used in this application, the term "cycloalkyl" represents an "alkyl" as defined above which forms a ring.

The terms "alkenyl" and "alkynyl" represent an alkyl containing at least one unsaturated group (e.g. allyl).

The term "hydroxy protecting group" is well known in the field of organic chemistry. Such protecting groups may be found in T. Greene, Protective Groups In Organic Synthesis,
10 (John Wiley & Sons, 1981). Example of hydroxy protecting groups include but are not limited to acetyl-2-thioethyl ester, pivaloyloxymethyl ester and isopropylloxycarbonyloxymethyl ester.

The term "aryl" represents an unsaturated carbocyclic moiety, optionally mono- or di-substituted with OH, SH, amino, halogen or C₁₋₆ alkyl.

The term "heteroaryl" represents an aryl wherein at least
20 one carbon ring atom is substituted by a heteroatom (e.g. N, O, or S).

The term "aminoalkyl" represents an alkyl which is covalently bonded to the adjacent atom through a nitrogen atom.

The term "thioalkyl" represents an alkyl which is covalently bonded to the adjacent atom through a sulfur atom.

30 The term "alkoxy" represents an alkyl which is covalently bonded to the adjacent atom through an oxygen atom.

Halogen are chosen from F, Cl, I, and Br.

The term "host" represents any mammals including humans.

In one embodiment, the host is human.

The compounds of the present invention are can be prepared by methods well known in the art. For example, such methods are described in the following references *J. Med. Chem.* **1991**, 34, 693-701; *Chem. Pharm. Bull.* **1995**, 43(11) 2005-2009; *J. Org. Chem.* **1989**, 54, 631-635; *Can. J. Some compounds of the present invention are commercially available at Sigma or Aldrich.

According to one embodiment, it will be appreciated that the amount of a compound of formula I of the present invention required for use in treatment will vary not only with the particular compound selected but also with the route of administration, the nature of the condition for which treatment is required and the age and condition of the patient and will be ultimately at the discretion of the attendant physician or veterinarian. In general however a suitable dose will be in the range of from about 0.01 to

about 750 mg/kg of body weight per day, preferably in the range of 0.5 to 60 mg/kg/day, most preferably in the range of 1 to 20 mg/kg/day.

The desired dose according to one embodiment is conveniently presented in a single dose or as divided dose administered at appropriate intervals, for example as two, three, four or more doses per day.

- 10 In another embodiment, the compound is conveniently administered in unit dosage form; for example containing 10 to 1500 mg, conveniently 20 to 1000 mg, most conveniently 50 to 700 mg of active ingredient per unit dosage form.

According to another embodiment of the present invention, the active ingredient is administered to achieve peak plasma concentrations of the active compound of from about 1 to about 75 μ M, preferably about 2 to 50 μ M, most preferably about 3 to about 30 μ M. This may be achieved, for example, 20 by the intravenous injection of a 0.1 to 5% solution of the active ingredient, optionally in saline, or orally administered as a bolus containing about 1 to about 500 mg of the active ingredient. Desirable blood levels may be maintained by a continuous infusion to provide about 0.01 to about 5.0 mg/kg/hour or by intermittent infusions containing about 0.4 to about 15 mg/kg of the active ingredient.

- While it is possible that, for use in therapy, a compound of formula I of the present invention may be administered as 30 the raw chemical, it is preferable according to one embodiment of the invention, to present the active ingredient as a pharmaceutical formulation. The embodiment of the invention thus further provides a pharmaceutical

formulation comprising a compound of formula (I) or a pharmaceutically acceptable salt thereof together with one or more pharmaceutically acceptable carriers therefor and, optionally, other therapeutic and/or prophylactic ingredients. The carrier(s) must be "acceptable" in the sense of being compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.

According to one embodiment of the present invention, pharmaceutical formulations include but are not limited to those suitable for oral, rectal, nasal, topical (including buccal and sub-lingual), transdermal, vaginal or parenteral (including intramuscular, sub-cutaneous and intravenous) administration or in a form suitable for administration by inhalation or insufflation. The formulations may, where appropriate, be conveniently presented in discrete dosage units and may be prepared by any of the methods well known in the art of pharmacy. All methods according to this embodiment include the step of bringing into association the active compound with liquid carriers or finely divided solid carriers or both and then, if necessary, shaping the product into the desired formulation.

According to another embodiment, pharmaceutical formulation suitable for oral administration are conveniently presented as discrete units such as capsules, cachets or tablets each containing a predetermined amount of the active ingredient; as a powder or granules. In another embodiment, the formulation is presented as a solution, a suspension or as an emulsion. Still in another embodiment, the active ingredient is presented as a bolus, electuary or paste. Tablets and capsules for oral administration may contain conventional excipients such as binding agents, fillers,

lubricants, disintegrants, or wetting agents. The tablets may be coated according to methods well known in the art. Oral liquid preparations may be in the form of, for example, aqueous or oily suspensions, solutions, emulsions, syrups or elixirs, or may be presented as a dry product for constitution with water or other suitable vehicle before use. Such liquid preparations may contain conventional additives such as suspending agents, emulsifying agents, non-aqueous vehicles (which may include edible oils), or preservatives.

The compounds of formula I according to an embodiment of the present invention are formulated for parenteral administration (e.g. by injection, for example bolus injection or continuous infusion) and may be presented in unit dose form in ampoules, pre-filled syringes, small volume infusion or in multi-dose containers with an added preservative. The compositions may take such forms as suspensions, solutions, or emulsions in oily or aqueous vehicles, and may contain formulatory agents such as suspending, stabilizing an/or dispersing agents. Alternatively, the active ingredient may be in powder form, obtained by aseptic isolation of sterile solid or by lyophilisation from solution, for constitution with a suitable vehicle, e.g. sterile, pyrogen-free water, before use.

For topical administration to the epidermis, the compounds of formula I, according to one embodiment of the present invention, are formulated as ointments, creams or lotions, or as a transdermal patch. Such transdermal patches may contain penetration enhancers such as linalool, carvacrol, thymol, citral, menthol and t-anethole. Ointments and creams

may, for example, be formulated with an aqueous or oily base with the addition of suitable thickening and/or gelling agents. Lotions may be formulated with an aqueous or oily base and will in general also contain one or more emulsifying agents, stabilizing agents, dispersing agents, suspending agents, thickening agents, or colouring agents.

Formulations suitable for topical administration in the mouth include lozenges comprising active ingredient in a flavoured base, usually sucrose and acacia or tragacanth; pastilles comprising the active ingredient in an inert base such as gelatin and glycerin or sucrose and acacia; and mouthwashes comprising the active ingredient in a suitable liquid carrier.

Pharmaceutical formulations suitable for rectal administration wherein the carrier is a solid. In another embodiment, they are presented as unit dose suppositories. Suitable carriers include cocoa butter and other materials commonly used in the art, and the suppositories may be conveniently formed by admixture of the active compound with the softened or melted carrier(s) followed by chilling and shaping in moulds.

According to one embodiment, the formulations suitable for vaginal administration are presented as pessaries, tampons, creams, gels, pastes, foams or sprays containing in addition to the active ingredient such carriers as are known in the art to be appropriate.

For intra-nasal administration the compounds, in one embodiment of the invention, are used as a liquid spray or dispersible powder or in the form of drops. Drops may be

formulated with an aqueous or non-aqueous base also comprising one more dispersing agents, solubilising agents or suspending agents. Liquid sprays are conveniently delivered from pressurized packs.

For administration by inhalation the compounds, according to one embodiment of the invention are conveniently delivered from an insufflator, nebulizer or a pressurized pack or other convenient means of delivering an aerosol spray. In
10 another embodiment, pressurized packs comprise a suitable propellant such as dichlorodifluoromethane, trichlorofluoromethane, dichlorotetrafluoroethane, carbon dioxide or other suitable gas. In another embodiment, the dosage unit in the pressurized aerosol is determined by providing a valve to deliver a metered amount.

Alternatively, in another embodiment, for administration by inhalation or insufflation, the compounds of formula I according to the present invention are in the form of a dry
20 powder composition, for example a powder mix of the compound and a suitable powder base such as lactose or starch. In another embodiment, the powder composition is presented in unit dosage form in, for example, capsules or cartridges or e.g. gelatin or blister packs from which the powder may be administered with the aid of an inhalator or insufflator.

In one embodiment, the above described formulations are adapted to give sustained release of the active ingredient.

30 The compounds of the invention may also be used in combination with other antiviral agents.

In one embodiment, the compounds of the invention may be employed together with at least one other antiviral agent chosen from protease inhibitors, polymerase inhibitors, and helicase inhibitors.

As used in this application, the term "interferon" include: interferon like molecules such as interferon (IFN), interferon α -2a, interferon α -2b, consensus interferon (CIFN) and other types of interferons.

10

In one embodiment, the compounds of the invention may be employed together with at least one other antiviral agent chosen from interferon (IFN), interferon α -2a, interferon α -2b, consensus interferon (CIFN), ribavirin, amantadine, rimantadine, interleukine-12, ursodeoxycholic acid (UDCA), glycyrrhizin and silybum marianum.

In one embodiment, the compounds of the invention may be employed together with at least one other antiviral agent chosen from Interferon- α , Ribavirin and Amantadine.

In one embodiment, the compounds of the invention may be employed together with at least one other antiviral agent chosen from Interferon- α and Ribavirin (REBETRON).

In one embodiment, the compounds of the invention may be employed together Interferon- α .

In one embodiment, the compounds of the invention may be employed together with Ribavirin.

The combinations referred to above may conveniently be presented for use in the form of a pharmaceutical

benzodioxaphosphorin-4-one 0.5 M in 1,4-dioxane (111 μ l, 0.056 mmol). The mixture was stirred 30 minutes at room temperature, then tributylamine (36 μ l, 0.152 mmol) and a solution of tributylammonium pyrophosphate 0.5 M in DMF (101 μ l, 0.051 mmol) were added simultaneously. The mixture was stirred another 30 minutes. A solution of I2 1% in pyridine/H2O (98 :2) (1.01 ml, 0.081 mmol of I) was added and the mixture was stirred 30 minutes. The excess of iodine was destroyed by adding 0.2 ml of aqueous sodium bisulfite 5%. The mixture was stirred 15 minutes, then it was concentrated under reduced pressure to remove all solvents. The residue was dissolved in water, washed two times with methylene chloride and once with ethyl acetate. The aqueous layer was concentrated and purified by charcoal column as follow: about 400 mg of charcoal, placed over a thin layer of Celite in a funnel with fritted disk, was prewashed by passing methanol, then deionized water (by vacuum). The crude residue was diluted in a minimum of water, acidified to pH 1-2 by adding few drops of HCl 1N, then placed on the top of the charcoal column. The column was eluted with deionized water (35 ml) in order to remove inorganic salts, then 0.5 N ammonia (15 ml) to collect the desired triphosphate. The collected triphosphate was concentrated and diluted in deionized water (1 ml) and concentrated NH4OH (2 ml). The mixture was stirred one hour at room temperature to cleave the acetyl group, then concentrated to dryness. The residue was purified on a pad of C18 RP silica gel eluting with deionized water (the desired triphosphate comes out fast). The fractions containing the desired triphosphate were collected and lyophilized to give the 3'-deoxycytidine 5'-triphosphate triammonium salt as a yellowish solid (18 mg, 69% yield, purity >85% evaluated by ¹H and ³¹P-NMR). ¹H NMR (400 MHz, D2O) δ : 7.90 (d, 1 H, 7.5 Hz), 5.99 (d, 1 H,

7.5 Hz), 5.73 (s, 1 H), 4.55 (s, 1 H), 4.35 (d, 1 H, 5.0 Hz), 4.26 (m, 1 H), 4.04 (m, 1 H), 2.05 (m, 1 H), 1.94 (m, 1 H) ppm. ³¹P NMR (162 MHz, D₂O) δ: -5.9 (br.s), -10.4 (d, 19 Hz), -21.5 (br.s) ppm. In a similar manner, the compounds of the invention can be obtained.

Example 2. Evaluation of Triphosphate Analogues

In The HCV RNA-Dependent RNA Polymerase Assay The following references which are referenced in the example are all incorporated by reference:

1. Behrens, S., Tomei, L., De Francesco, R. (1989) *EMBO* 15, 12-22
2. Harlow, E, and Lane, D. (1989) *Antibodies: A Laboratory Manual*. Cold Spring Harbord Laboratory. Cold Spring Harbord. NY.
3. Lohmann, V., Körner, F., Herian, U., and Bartenschlager, R. (1989) *J. Virol.* 71, 8416-8428

Compounds were evaluated using an *in vitro* polymerase assay containing purified recombinant HCV RNA-dependent RNA polymerase (NS5B protein). HCV NS5B was expressed in insect cells using a recombinant baculovirus as vector. The experimental procedures used for the cloning, expression and purification of the HCV NS5B protein are described below. Following are details of the RNA-dependent RNA polymerase assays used to test the compounds.

Expression of the HCV NS5B protein in insect cells:

The cDNA encoding the entire NS5B protein of HCV-Bk strain, genotype 1b, was amplified by PCR using a plasmid containing a cDNA version of the full-length HCV genome as template. The oligonucleotides used to amplify this HCV

region were designed to introduce a *NheI* site followed by an ATG at the 5' end of the NS5B coding region as well as a *BamHI* site at the 3' end immediately downstream of the translation stop codon. The amplified sequence, of 1.8 kb, was digested with *NheI* and *BamHI* and ligated to a predigested pBlueBacII plasmid (Invitrogen). The resulting recombinant plasmid was designated pBac/NS5B. Sf9 cells were co-transfected with 3 µg of pBac/NS5B, together with 1 µg of linearized baculovirus DNA (Invitrogen), as described in the manufacturer's protocol. Following two rounds of plaque purification, an NS5B-recombinant baculovirus, BacNS5B, was isolated. The presence of the recombinant NS5B protein was determined by western blot analysis (Harlow and Lane, 1988) of BacNS5B-infected Sf9 cells, using a HCV NS5B specific rabbit polyclonal antiserum (anti-NS5B). Infections of Sf9 cells with this plaque purified virus were performed in one-liter spinner flasks at a cell density of 1.2×10^6 cells/ml and a multiplicity of infection of 5.

Preparation of a soluble recombinant NS5B protein:

Sf9 cells were infected as described above. Sixty hours post-infection, cells were harvested then washed twice with phosphate buffer saline (PBS). Total proteins were solubilized as described in Lohmann et al. (1989) with some modifications. In brief, proteins were extracted in three steps, S1, S2, S3, using lysis buffers (LB) I, LB II and LB III (Lohmann et al, 1997). The composition of LBII was modified to contain 0.1 % triton X-100 and 150 mM NaCl to reduce the amount of solubilized NS5B protein at this step. In addition, sonication of cell extracts was avoided

throughout the protocol to preserve the integrity of the protein structure.

Purification of recombinant NS5B using fast protein liquid chromatography (FPLC):

Soluble NS5B protein in the S3 fraction was diluted to lower the NaCl concentration to 300 mM, then it incubated batchwise with DEAE sepharose beads (Amersham-Pharmacia) for 2 hrs at 4°C, as described by Behrens et al. (1989).

10 Unbound material was cleared by centrifugation for 15 min at 4°C, at 25 000 rpm using a SW41 rotor (Beckman). The supernatant was further diluted to lower the NaCl concentration to 200 mM and subsequently loaded, with a flow rate of 1 ml/min, on a 5 ml HiTrap® heparin column (Amersham-Pharmacia) connected to an FPLC® system (Amersham-Pharmacia). Bound proteins were eluted in 1 ml fractions, using a continuous NaCl gradient of 0.2 to 1 M, over a 25 ml volume. NS5B-containing fractions were identified by sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE), followed by western blotting using the anti-NS5B antiserum at a dilution of 1:2000. Positive fractions were pooled and the elution buffer was exchanged against a 50 mM NaPO₄ pH 7.0, 20 % glycerol, 0.5 % triton X-100 and 10 mM DTT, using a PD-10 column (Amersham-Pharmacia). The sample was then loaded onto a 1 ml HiTrap® SP column (Amersham-Pharmacia), with a flow rate of 0.1 ml/min. Bound proteins were eluted using a continuous 0 to 1 M NaCl gradient over a 15 ml volume. Eluted fractions were analyzed by SDS-PAGE and western blotting. Alternatively, proteins were visualized, following SDS-PAGE, by silver staining using the Silver Stain Plus kit (BioRad) as described by the manufacturer. Positive fractions were tested for RdRp activity (see below) and the most active

ones were pooled, and stored as a 40 % glycerol solution at -70°C.

In vitro RNA-dependent RNA polymerase assays used to evaluate the triphosphate form of nucleoside analogues:

RdRp assays were conducted using *in vitro* transcribed heteropolymeric RNA templates.

RdRp reactions were performed in a total volume of 50 µl of a buffer consisting of 20 mM Tris-HCl pH 7.5, 1 mM DTT, 50 mM NaCl, 0.5 mM MnCl₂ and 5 mM MgCl₂. Standard HCV RdRp

10 reactions contained 200 ng of purified NS5B protein. The substrate mixture included in the assay depended on the base of the nucleoside triphosphate to be tested (adenine, guanine, cytosine or uracil analogue). The NTP substrate with a similar base to that of the inhibitor, was added at twice the measured Km. This concentration included 5 µCi (3000 Ci/mmol) of a [³²P] version of this nucleotide. The remaining three substrates were used at 100 µM. The measured Kms for the four substrates were as follows: 18 µM for ATP, 0.5 µM for CTP and GTP, and 1.2 µM for UTP.

20 Following a two hour incubation at 22°C, reactions were stopped by the addition of 100 µg of sonicated salmon sperm DNA (Life Technologies) and 1 ml of 10 % trichloroacetic acid (TCA)-0.5 % tetrasodium pyrophosphate (PPi). Nucleic acids were precipitated at 4°C for 30 min after which samples were filtered on GF/C glass microfiber filters (Millipore). Membranes were subsequently washed with 25 ml of a 1% TCA-0.1 % PPi solution, then air dried. Incorporated radioactivity was quantified using a liquid scintillation counter (1450-Microbeta, Wallac).

30 Heteropolymeric RNA templates were generated by run-off transcription. As template for these transcription reactions, a recombinant pcDNA3 plasmid (Invitrogen) containing a cDNA version of the HCV genome was used and

referred to as pcDNA/HCVfl. In vitro transcriptions were performed using the MEGAscript™ kit (Ambion), as suggested by the manufacturer. In brief, the plasmid pcDNA/HCVfl was linearized with EcoRI to generate a truncated HCV transcript of about 6900 nucleotides. Linearized DNA was extracted with a one to one volume of phenol/chloroform, precipitated with ethanol, then 1 µg of this linearized DNA was used as template in T7 RNA polymerase-driven in vitro transcription reactions. Transcripts were extracted using the TRIZOL® reagent (Life Technologies) and an aliquot (1 µg) was used as template in RdRp assays.

Compound	HCV polymerase
	IC ₅₀

COMPOUND#2	0.036μM
COMPOUND#4	0.3μM
COMPOUND#6	0.26μM
COMPOUND#8	1.98μM
